

Short Explanations of the Catalogs

- **NEW: GöDiscovery ([direct link](#))**
GöDiscovery, the new discovery service of the SUB Göttingen, is the alternative to the Göttingen University Catalogue (GUK). The preset local search scope contains the holdings of the GUK, references to articles from locally available printed journals and full-text accessible articles from electronic journals and e-books, e.g. from Springer e-journals, national licences and the Directory of Open Access Journals. The search scope can be extended in the settings. The expanded search scope (including interlibrary loan) contains, in addition to the holdings of the local search scope, the holdings of the libraries of the Common Library Network (GBV), the SWB Library Network and a large number of other articles, e.g. from Elsevier e-journals, JSTOR, PubMed and preprints.
- **Göttingen University Catalogue ([GUK](#))**
The GUK lists the holdings of the Göttingen State and University Library (SUB Göttingen) and departmental libraries of the University of Göttingen. As a rule, book or journal articles are not included.
Especially helpful for searching the literature of the FID Central Asia.
- **GBV Union Catalogue ([GVK](#))**
The GBV Union Catalogue (GVK) comprises the holdings of libraries in ten German federal states as well as of the Staatsbibliothek zu Berlin and further institutes. As a rule, all titles listed can be ordered via inter-library loan within Germany.
Especially helpful for searching the literature of the FID Central Asia.
- **Electronic Journals Library ([EZB](#))**
The Elektronische Zeitschriftenbibliothek EZB (Electronic Journals Library) offers fast, structured and standardized access to scientific and academic full text journals. The participating libraries offer full text access to the respective journals they subscribe to.
- **Databases [German user interface] ([DBIS](#))**
Das Datenbank-Infosystem (DBIS) ist ein kooperativer Service zur Nutzung wissenschaftlicher Datenbanken. Momentan umfasst DBIS fast 9000 Einträge, wovon gut 3000 Datenbanken frei über das Internet verfügbar sind. Bitte beachten: Sie können hier nur nach den Titeln und Schlagwörtern der Datenbanken suchen und nicht im Inhalt der Datenbanken suchen.
